

EVASTOMPER was born in 2007 with the intention of creating a space where ideas take shape and voice. Art, imagination and creativity merge the expertise of architects, designers and stylists to create always new projects. Events, exhibitions, interiors, sets and installations are conceived using the approach of those who want to ensure a strong visual impact and, at the same time, can't conceal their unmeasured love for the ephemeral and the timeless. The starting point is a void to be filled, a sheet to shape, an origami to create, while the final point is constantly the same: the dialogue with the client in order to reach together the same unique aspiration.

MOD2+

MOD2+

MODfurniture takes form from the idea to develop modular objects where the keyword is multifunction. In a world where the immediate space in which we live is always more structured and co-ordinated, the objects reply by reducing their incumbrance while continuing to carry out all of their possible functions. The preference for pure forms and the essential lines, the research of materials and the concept of the module characterizes our planning reflection and the realization of a complete furniture collection.

MODurbano

MODurbano

MODurbano is the sitting that goes around the city. Essential, lightweight and customisable, it fits any urban-space. Technically called "parking bollard", it can be transformed into a comfortable chair/table, allowing people to live the city corners and every meeting place at any moment. In the outdoor areas, now abandoned to the greyneess, it could be the right and simplest solution to repopulate and animate the streets, giving them back their importance as public social places.
